**Re: BP America Production Company  
Ulysses North Sublette Compressor Station  
Section S26, Township 25S, Range 33W  
Source ID No. 550004  
Update Regarding NESHAP 40 CFR Part 63 Subpart ZZZZ Initial Notification Submitted**

Dear Ms. Weber:

On August 20, 2010, the United States Environmental Protection Agency (EPA) published Amendments to 40 CFR Part 63, Subpart ZZZZ National Emissions Standards for Hazardous Air Pollutants (NESHAP) for stationary reciprocating internal combustion engines (RICE) which included requirements for "existing" (as defined under the subpart) spark ignited (SI) RICE  $\leq 500$  horsepower (hp) located at major sources of hazardous air pollutants (HAPs) and all existing SI engines located at area sources of HAPs (effective October 19, 2010). As a result, on February 8, 2011, within 120 days of the effective date of the published amendments, BP America Production Company (BP) submitted initial notifications to EPA for newly affected NESHAP Subpart ZZZZ sources at the Ulysses North Sublette Compressor Station. BP is submitting this notification to provide the EPA with updated information regarding North Sublette #4 compressor, a 637 hp Caterpillar G3412 TALE stationary RICE, for which an initial notification was previously submitted.

Because this was a like-kind engine replacement, the only information that has changed for the affected sources at the North Sublette #4 is the serial numbers. The serial number of the replacement engine is 6ZM00385. The serial number of the engine that it replaced is 6ZM00392.

If you need any additional information, please call me at (620)356-6917.

Sincerely,

Cody Graber  
Field Environmental Advisor
